Practice Use Notes

BEFORE INTRODUCING THESE FORMS

- ☐ Have the clinic lead, insurer and appropriately qualified practitioner review every form against the exact device, product, medicine, training, licence and local-authority requirements in use.
- ☐ Replace generic risk wording with the current manufacturer instructions for use and clinic standard operating procedure where those are more specific.
- ☐ Keep completed forms secure, control access, apply the clinic retention policy, and record any separate lawful basis/consent required for marketing photographs.
- ☐ Reconfirm consent and check for changes in health, medicines, pregnancy status, skin condition, tanning and recent procedures at every appointment.
- ☐ For prescription-only medicines or injectable treatments, retain the separate prescription/direction, medicine-specific assessment, batch/expiry, administration and emergency records required by the practitioner's professional standards.

This pack is an operational template, not legal or medical advice. It does not replace device/product instructions, professional standards, emergency protocols or clinical judgement.
